Summary

I am a Full Stack Developer with a strong background in Python, Flask, Streamlit, LangChain, React.js, JavaScript, and Tailwind CSS.

I specialize in creating AI tools integrated with Gemini Pro or Gemini Pro Vision, and OpenAI API like ChatGPT.

My GitHub profile showcases my projects and the depth of my experience. One of my notable projects is "Creator-GPT", an AI-powered tool for creators. This tool allows users to generate content for various platforms like YouTube, LinkedIn, and Twitter. It's a testament to my ability to work with AI technologies and my proficiency in Python and JavaScript.

Another significant project I've worked on is the "Leaf Disease Detection System". This system uses Gemini Pro Vision to detect diseases in leaves, demonstrating my ability to apply AI in practical, real-world scenarios.

I believe in delivering high-quality work and I am always eager to tackle challenging projects. I am confident that my skills and experiences make me a strong candidate for your project.

Looking forward to bringing your vision to life!
